

**Biom'up continues its ascent with the promising research and development project progression: COLOMATRIX.**

**Lyon (France), March 20, 2015**

Biom'Up announced today that it has received public funding from the French State, the Rhone-Alpes Region, the Grand Lyon Metropole, the General Council of Isere and the FEDER European funds. These funds will be used to develop an innovative collagen-based medical device for the prevention of one of the major causes of morbidity and mortality in digestive surgery. The device will combine high tech polymers and textiles for unique biological and mechanical properties. This project is approved by Lyonbiopole and Techtera – two leading competitiveness clusters.

**About Biom'Up**

Founded in 2005, Biom'Up develops medical devices composed of patent-protected biopolymers. With broad expertise in biomaterials, we create innovative and clinically proven products that are used in many surgical specialties - orthopedics, spine, cardiothoracic, general, maxillofacial and dental. We are committed to the design, development and delivery of novel, high-performing solutions that make life easier for surgeons and better for patients.
